**Supplementary Figure 1:** Absorption spectra of  $\alpha$ -methylbutyrylshikonin (**1**), acetylshikonin (**2**) and  $\beta$ -hydroxyisovalerylshikonin (**3**) (concentration of each was  $8.00 \times 10^{-5}$  M) before (blue line) and after addition of CT-DNA ( $0.00-1.73 \times 10^{-4}$  M). Arrow shows the absorbance changes upon increasing concentration of CT-DNA.

**Supplementary Table 1:** Results of docking analysis of the  $\alpha$ -methylbutyrylshikonin (**1**), acetylshikonin (**2**) and  $\beta$ -hydroxyisovalerylshikonin (**3**) with DNA: corresponding purine bases with its position in the structure of DNA, type of interaction during bond formation, distance in Å between respective active sites of naphthoquinones and purine bases, pairwise interaction energy ( $E_i$ ) in kJ mol<sup>-1</sup>, ( $\Delta G_{bind}$ ) in kJ mol<sup>-1</sup>, binding energy, estimated inhibition constant ( $K_i$ ) in  $\mu$ M.

Complexes	Interaction	Type of interaction	Distance (Å)	$E_i$ (kJ mol <sup>-1</sup> )	$\Delta G_{bind}$ (kJ mol <sup>-1</sup> )	$K_i$ ( $\mu$ M)
